Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Anatomical Researches on the So-Called Prostatic Hypertrophy and Allied Processes in the Bladder and Kidneys The characteristics of the clinical picture are only to be obtained by presenting them on a uniform general anatomical basis. The Guyon school tries accordingly to connect all urinary symptoms observed in a lifetime with similar anatomical changes in the whole genito urinary apparatus. The characteristic oi these changes is said to consist of sclerosis of all the tissues and parts of this apparatus. They state the sclerosis attacks mainly the bladder wall, but it exists at the same time in the kid ney, testicle and prostatic tissues, by which the prostate gland in most of the cases can become enlarged. With the exception of the process of in ammation, which is con sidered an accidental complication, all changes in the different divisions of the genito-urinary apparatus are then, according to their school, one and the same thing. They are all called forth by the same general cause which lies outside of the genito - urinary apparatus, and which in uences the whole human...
